Handling of Moulded Cornice

Cornice will generally be packed in bundles face to face to minimise damage during transit. Bundles are to be rotated so the edges are facing up and down before lifting. Bundles are to be carried by two people, one at each end about 500mm from the ends of the cornice. Bundles are to be put down before rotating flat again to reduce cracking.

Note:

If the cornice does crack it is still usable as it is held together by sisal fibre and the cracks are generally hairline and easily covered by a coat of paint.

Fitting of Moulded Cornice

Firstly the drop of the cornice (measured from the ceiling to the bottom edge) has to be marked on the walls with a water/laser level and chalk line.

Steel nails are inserted on the chalk line at about one metre intervals.

The walls are measured and marked with the measurements for each length.

The cornice is placed in a suitable mitre box upside down at the correct angle with the drop measured on the vertical surface.

The cornice is cut with a sharp wood saw to the correct lengths and mitres as measured.

If the walls are primed or painted already then Bonding liquid should be applied to the wall and ceiling where the plaster adhesive will make contact.

The plaster adhesive is then mixed in a clean bucket with potable water to a stiff mixture.

The adhesive is then applied about finger thickness to the top and bottom edges of the cornice with a steel trowel.

The cornice is then applied to the wall, resting on the steel nails, and pushed up onto the ceiling so that the adhesive makes good contact and gently oozes out.

Nails are then tapped gently into the ceiling along the top edge of the cornice holding it in place while the adhesive sets.

Care should be taken at this stage to align the cornice with the next length so the lines run true. Continue fitting the cornice until the adhesive is finished and send someone to clean the bucket while the adhesive is still soft.

Clean the excess adhesive from the top and bottom edges of the cornice as well as any that has found it's way onto the face before it sets.

Use the removed excess adhesive to patch the gaps between the lengths, the corner joins and any chips or dents that have occurred during handling.

As the adhesive sets, clean the top and bottom edges and joins with a wet brush or cloth to a smooth finish, ready for painting when completely dry.

Notes:

If the cornice is properly patched and cleaned at this stage, no further work is necessary before painting.

DO NOT USE SANDPAPER ON THIS CORNICE.

Ornamental Mouldings has a large and celebrated range of moulded gypsum cornice. From ornate to elegant we have them all.

Remember, when ordering, to add 5-10% for offcuts.

Plaster of Paris cornice will not shrink or warp. If fitted correctly they will last the lifetime of the building with minimum upkeep.

When fitting to already painted walls please use Bonding Liquid to help the adhesive stick to the paint.

Larger cornice should be screwed into the walls with a plug and nail system.

When fitting to tiles or cupboards then a flexible tile adhesive should be used to create a flexible joint.

The same can be used where there are new, large trusses, where excessive movement is experienced or expected.

We also make all our products in Concrete.

Concrete prices are double standard gypsum prices. (Normal Price x 2).

**Wall
Mouldings**

Tel: +27 (31) 705 7481
WhatsApp: +27 (31) 705 7481
Email: ornamental@mouldings.co.za

Notes:- Wall mouldings have many uses, some mouldings are more suitable for certain applications than others, however, there are no hard and fast rules. Here are a few typical uses for our mouldings with the product codes following.

Architraving - WM/05, 10, 11, 18, 24, 31 and 61.

Dado rails - WM/03, 04, 05, 13, 14, 15, 19, 27, 28 and 29.

Picture rails - WM/02, 13, 15, 19, 22, 25 and 30.

Panels - WM/02, 06, 09, 16, 17, 19, 20, 22, 25, 39 and 40.

Mirror mouldings - WM/03, 04, 20, 21, 26, 27, 71, 72 or combinations of mouldings like WM/03 and 21 together.

Parapet wall mouldings - WM/33, 34, 35, 36 and 37.

There are also base blocks, capitals and corners available for selected mouldings. Look for the following annotations next to the moulding profiles:-

Most of these mouldings are available in Concrete for external waterproof use. (Double the regular price for cement)

Window sill mouldings are designed to be fitted flat on the wall, under the window opening. The reveal is then plastered back to the frame at an angle.

Our window sill mouldings are made to order to the correct size for your windows. The returns on each side as in the pictures are pre-formed on each sill, saving you time.

Prices Include 15% VAT. Measurements in mm.
Subject to change without notice. Errors and omissions excepted.

Our fine plaster of Paris reproduction Air Vent Covers are just like the originals and are durable replacements for the cheap plastic ones currently found in hardware stores.

We generally keep at least 20 of each in stock in plaster.

We also supply these designs, to order, in cement for external use at twice the listed price below.
